

THE CLIMATE PAVILION IN KOLDING

The vision of this project is to create new experiences in nature for children, young people and adults in the city.

The Climate Pavilion combines rainwater management with play and physical activity, and is placed in a larger 'climate corridor' that runs from the open country to the city center of Kolding. The City Park in Kolding is the center of the climate corridor and here you find the Climate Pavilion. The pavilion is built in sustainable wood and designed as an open shelter that invites visitors to stay regardless of wind and weather.

The interior design of the pavilion has three functional areas: a barbecue area for cooking, a dining area, and a teaching area with tables, cupboards and a blackboard. Furthermore, the pavilion's stairs, and wooden terrace offer a nice stay with a view of both the lake and the meadow.

Jacob Færch, Development Consultant at the Danish Foundation for Culture and Sports Facilities, says about the project: "The climate pavilion are able to support a variety of activities in the urban nature: New activity opportunities for joggers, a new place for families' play and experiences with nature, and a new alternative environment for the education of primary schools."

The project is constructed in close co-operation with carpenter Jørgens Lund Frederiksen A/S, and is a part of the Urban Nature campaign 'CityNatureSpace' by The Danish Foundation for Culture and Sports Facilities and the Danish Outdoor Council.

DEVELOPER: Kolding Municipality | The City Park, DK-6000, Kolding | 125 sqm | 2015 – 2017 | 1.4 million DKK | COLLABORATORS: Jørgen Lund Frederiksen A/S
